"The Ultimate Mini Planer"

OR34 MINI PLANER BOARD

One Board...Dual Purpose...It's Reversible!

To run this board off the port side of the boat simply assemble the board as shown in the diagram above. Reverse the direction of the bracket to run this board off the starboard side of the boat; it's that easy! **One Board...Dual Purpose...It's Reversible!**

The pinch pad release system allows you to easily attach and remove this board from the line. The pad tension can also be adjusted for different trolling situations by simply sliding the spring. Simply slide the spring towards the pads for the heavy setting or away from the pads for the light setting.

You run this board directly off the line from your rod. Let out your line the desired distance, place the line in the snap swivel and then into the pads of the OR10 release then continue to let out your line to the final desired distance.

The Mini Planer can be reeled in and removed easily or you can allow it to be tripped so it will slide down to a set stop ahead of your lure. Do **NOT** let the board slide down all the way to the lure!
